Began: Mar. 2006

Completed: Oct. 2006

The continued growth in Community College Athletics has included soccer as a mainstream sport. The Cape Fear Community College found itself supporting a team without a facility. The Athletic Director, with the support of the college president, obtained open property within the college's developing North Campus.

Coastal Land Design, PLLC was retained to design, permit and oversee construction of a "college level" soccer facility. Our experience with athletic field development along with open communication with the college athletic department provided the recipe for success.

Today the facility is touted as one of the finest in the JUCO nation. The main field is of competition size with a top quality grassed surface. The independent practice area compliments the main field and provides an area for goal work and skills training. The facility is now considered a main component of the campus.
